:: 1.0 RC2 Version

### ***EasyBeans for OW2 JOnAS J2EE application server***

This package should be use to enable EJB 3.0 into [JOnAS J2EE 1.4 certified application server](#).

It has been tested against 4.7.x and 4.8.x

The deployment of the EasyBeans container is done through a .rar file.

Hibernate EntityManager:	 
--------------------------	--

Apache OpenJPA:		
Toplink Essentials:		

### ***EasyBeans for Apache Tomcat server***

This package is designed for [Apache Tomcat server](#). It has been tested with Tomcat 5.5.x and 6.x.

The deployment is done with a single .war file to drop into \$CATALINA\_BASE/webapps folder. Of course, advanced configuration is available but a default configuration is available as soon as the war is deployed.

Hibernate EntityManager:		
Apache OpenJPA:		
Toplink Essentials:		

### ***EasyBeans for Jetty server***

This package is designed for [Jetty server](#). It has been tested with Jetty 6.1.0RC1. Note that it work only with Jetty 6.1.x

The deployment is done with a single .war file to drop into \$JETTY\_HOME/webapps folder. Of course, advanced configuration is available but a default configuration is available as soon as the war is deployed.

Hibernate EntityManager:		
Apache OpenJPA:		
Toplink Essentials:		

### ***OSGi bundles of EasyBeans***

This package is designed for being used on OSGi gateway that are provided for example by Apache Felix and Eclipse Equinox projects.

There is a documentation available in the [EasyBeans Wiki](#)

Hibernate EntityManager:		
--------------------------	---	---

## ***Documentation package of EasyBeans***

All the documentation (including HTML and PDF) of EasyBeans is available in this package. It includes user's and developer's guide and some howto documents as well. For example there is an howto explaining the use of Google Web Toolkit with EasyBeans.

The JavaDoc of EasyBeans is included in another documentation package.

## ***Source package of EasyBeans***

Developers or advanced users can use this source version which provides ready-to-use ant tasks allowing to create the binary jar files, javadoc, etc.

EasyBeans provides some classes that allow to embed or extend EasyBeans in a simple way.

[>>Archives](#) Note : These packages are TCK untested
